

# Benefits of using Storeganizer

## Space saving

There is always a need to have more space in a warehouse. With Storeganizer on average **40% additional footprint** could be created in the existing available space.

“ Compared with our previous system, we save 90% of the space in square and cubic foot with the densely-packed Storeganizer columns ”

Hilde De Meyer, System Administrator  
Gates Distribution

## Decrease walking distance

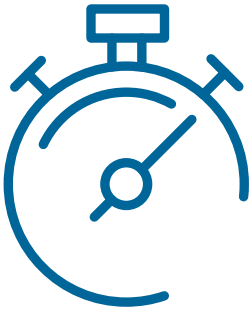

By implementing multiple rows of columns in existing racking, additional storage locations are created. Warehouse operators now have to travel less distance to reach the pick location. It's one small step for orderpickers, but a giant leap for efficiency. Around **42% time on travelling could be saved** thanks to Storeganizer.

“ With the Storeganizer solution we are now hitting 40% more SKUs per linear travel distance than we were previously ”

David Cuddeford, Principal Engineer  
Ingram Micro Northampton

MORE STORAGE IN LESS SPACE

## Efficient

Combining the first two benefits of Storeganizer leads to a significant improvement of the order picking efficiency, defined as order lines picked per manhour.

On average Storeganizer could **enhance productivity with 26%**

“With static shelving we could do 25-30 picklines per hour, with Storeganizer we can do now 60-80 picklines per hour”

Peter Muthama, Warehouse Manager  
Chalhoub

## Scalable

Business is always evolving and growing, being flexible and resilient is key. Storeganizer can easily be scaled based on requirements.

Next to that Storeganizer can be easily transferred as with their universal suspension system it fits in any pallet rack.

“Faced with an growth of 60%, Storeganizer played an undeniable role allowing Everten to optimize the current warehouse and postponing moving to a new facility”

Kelvin Plain, Warehouse Manager  
Everten Group Services
